

The SG-5100 pfSense Security Gateway Appliance can be configured as a firewall, LAN or WAN router, VPN appliance, DHCP Server, DNS Server, and IDS/IPS with optional packages to deliver a high performance, high throughput front-line security appliance at an excellent price. With preloaded pfSense software, the SG-5100 is a fast networking security solution unencumbered by traditional annual contracts, licensing fees, or artificial limitations. Built with performance, versatility, and low total cost of ownership in mind, this is a low power system built for long life and solid reliability in a compact footprint.
